

FLORILÈGE
DE LA POPULARISATION
des mathématiques

www.florilege-maths.fr

Launch of the website Florilège de la popularisation des mathématiques

The creation of a website dedicated to the different methods used in the outreach of mathematics is part of the desire to share what has been done in past centuries as well as in recent times, in France and in the French-speaking regions, as widely as possible. With nearly 1300 references already identified, this site attests of a long French tradition as well as of a remarkable continuous dynamics.

In order to enhance the bid of Paris to host the International Congress of Mathematicians in 2022 (ICM 2022), this site brings together numerous actions aimed at the general public. One finds there books, magazines, exhibitions, films and videos, conferences, radio or television broadcasts, or a new use of the virtual media ...: without pretending to be exhaustive, the website is a place of memory and projects. It is completed by introductions specific to each type of communication.

A search engine offers search by keyword, title, author, actor, place, theme ... The interaction with readers is guaranteed by a banner «Participation» on the home page.

The website is hosted by the [GdS Mathrice CNRS 2574](#) and has the support of the [Fondation Blaise Pascal](#).
